

Other files recovered pertained to planning of the EDMIS project and projected (not actual) expenditures of funds were recovered. These additional files are available for your review.

- No specific documents relating to Styli Camateros, Cary Mann or Steve Sims found on any of the electronic media recovered.
- No memorandum from Emestine Briscoe and copied to Ms. Georgalis was found.
- E-mails recovered are provided as Attachment 2.
- Spreadsheets and documents relating to purchase orders are provided as Attachment 1.
- The dates on the files recovered appear to indicate that Ms. Georgalis was using the computer we examined since December 11, 1998.
- At your request, we conducted a review of Mavis Georgalis's computer hard-drive and 62 diskettes from her work area. We also conducted an E-mail archive search of the Lotus Notes files for Mavis Georgalis and Curtis. Computer files from December 11, 1998 and E-mails from March 3, 2000 were recovered.

The specific results to your request are as follows:

the computer was using

"HMR, Inc." is mentioned in an E-mail from Mavis Georgalis to Vicki Bradford on September 18, 2001. (See Attachment 2)

MEMORANDUM

June 28, 2002

Spreadsheets and Word documents concerning Yang Invvoices recovered from Mavis Georgalis's computer are provided in this attachment. The Excel spreadsheet filenames are Yang Invvoices 00-01, 0001-BalSheet, and Yang. One document is a letter from Yang Enterprises to Mavis Georgalis concerning purchasing software. The other document is a text fragment, so the complete document with headings, dates, etc., is not available.

Attachment 1

I understand how you guys are trying to get the clustering to work for you. Unfortunately, Arcis 7.0 was not designed to support it (hence, the license failed to the NIC, much the way a dongle is failed to a machine). If the "second node" is not the right NIC, we need to know ASAP to get the licenses corrected.

Arcis 7.2, which doesn't require the license file, requested a license for 000C9d5E00A. I believe that is the server testing including the license for the test server (TLMCS4 000C9d5B5C7). We never included the new one arcives (in case it doesn't come back today). I'm also until the developer's license which you can use for District One.

I have requested the new license file for District One. The NIC address in the license file is the one we were originally provided last year (when the license files were requested from Germany).

Dale, et al,

<Bill, I have received the license.zip yesterday and extracted the files
successfully this morning. My workload prevented me from reviewing the
files until this morning.
All of the files are correct except District One, which needs to be
00a0c9d5df60. The file you sent has 00a0c9d5b659 (the private interconnect
network card address)
I spoke with Mike Novak this morning and he does not remember ever
being able to successfully get the Arcis application running with a permanent
file.

三

If you have any problems getting the licences to work, give me a yell.

End quote

A backup system is only used if the primary productive system fails. The parallel use of a backup system and primary productive system through clients of any kind is not allowed. A backup system is supplied with all necessary licenses for replacing the primary system if needed.

If CE ARCTIS is to be configured so that a further "backup server" is installed in addition to the productive server, additional licenses are required for this backup server. Please contact sales for the special terms and conditions for backup servers.

2.1.10 CE ARCTIS configurations with backup server

Jim Hopper
Thanks,

Please have Dale keep Bill advised as to your progress, so we may assist as needed during the day.

As you are aware, 7.2 version of ARCS does not have the license requirement.
FDOT is the only user who has experienced this condition.
Tallahassee to assist in the final solution to this problem. Apparently,
will need to advise VFI if you deem it necessary, and desire VFI to send
one week for FDOT to use the developers license to keep you running. FDOT
are unable to correct the problem, VFI will authorize a "grace period" of
Bill and Dale
solving the problem identified, as it relates to each of your servers. If
Bill is working this morning with Dale Barnett, with the intent of

5. Depart Orlando on Wednesday, (01/10/01) to return to Germany.
4. Back in YET offices on Monday (01/08/01) morning.
3. Depart from Tallahassee on Friday (01/05/01) afternoon.
2. Depart (by automobile) for Tallahassee either on Wednesday (01/03/01) afternoon, or early Thursday morning. (Either way Mr. Dubois will be available early Thursday morning to begin the photo tasks).
1. Arrival at YET offices, Florida office on Wednesday (01/03/01) morning.

Mr. Dubois Florida visit has been planned for 01/03/01 to 01/10/01, and he is scheduled to arrive at, and depart from, the Orlando Airport.

It is anticipated that this schedule will allow ample time to complete the required tasks you have outlined, as well as the desired communications and training between Mr. Dubois and the appropriate YET staff.

The following travel schedule has been confirmed with CE and TREV for Mr. Dubois.

Thank you for your patience.

E-mails from Li and Tim Yang:

- Ms. Georgalis E-mailed instructions to Yang Enterprises to cease all work on the project unless prior approval was received from the project manager. Yang was notified, by E-mail, that all professional services work would require prior approval.
 - Letter from Jim Hopper of Yang Enterprises, dated December 11, 2000, states that Yang would deliver a software maintenance proposal to the Department by December 15, 2000.
 - On April 4, 2001, Cliff Curtis requested permission to develop a help data base for the CEI Image Exporter (the Department's version of exporter).
 - On December 3, 2001, Nelson Hill directed distribution of CEI Image Exporter to stop.
 - On April 4, 2001, Mike Cohen of Yang Enterprises informs the Department that Yang has copied righted the software.
 - On April 4, 2001, Mike Cohen of Yang Enterprises informs the Department that Yang has copied righted "HMR" is found in an E-mail from Ms. Georgalis to Vicki Bradford on September 9, 2001.
 - Some E-mail's from Ms. Georgalis's inbox appear to have been encrypted and sent by stern19@dreamx.net

E-mails reviewed indicate:

E-mail from the archives of MAVIS Geographics and CIMA Consults concerning details with Yang Enterprises are provided in this attachment.

Li
Reagards,

the future.

Let's talk about this tomorrow as we need to discuss the issues you have in order to see if we can resolve them and then start off with a clean slate for

this morning's phone call to Verin was made because Mike felt he has no better way of addressing the support issue to Verin in response to this morning's e-mail from Verin. Mike asked Jim Hopper to explain to Verin our contract agreement with Stemens/CB in regards to our role in supporting DOT because he had been taking care of the contractual issues in the past among YETI, Stemens, and CR/Treer and could better explain them to him. Once Verin have involved, things became complicated which wasn't meant to be.

to you, I hope this explanation can ease your mind.
regards to a contractual issue between YETI and DOT, it would have come from me to respond to you in the matter you have presented. If this was a response in support in order for us to be more responsive to your needs. He had no intent between YETI and Stemens/CB and to inform Verin about the proper channels for trying to convey to Verin about our responsibility in regards to providing support to the DOT based on what he knows about the contractual arrangement response to Verin was to Verin only. Mike manages the YETI Help Desk and was I understand you also were upset our correspondence to DOT, Mike Cohen's s

on our part.
be seen by our correspondence, and please understand that there is no hold back always been our intention to bring an executive from our partner to you as can make this happen. The delay of meeting with you is beyond our control. It has product owner to meet with you per your request. We have tried very hard to in regards to supporting DOT. They evidence that we have demanded the ARCSIS since I am already scheduled to go over some issues with you tomorrow in Tallahassee, I will show you the correspondence between YETI and Stemens-CB-Treer

with the ARCSIS product owner in Tallahassee.
concerns you have and that you are very adamant about them, specifically meeting Lowell Weaver, and Mike Cohen, but I have been made aware of your serious concerns I wasn't present in this morning's teleconference between you and Jim Hopper, Mavis Georgallis,

Mavis,

Thanks.

I am working on the invoices for the services for the period beginning July 1, and ending December 31, 2000, and will deliver them to you at the EDMS conference in San Antonio.

1. The work performed was for 11 total hours on 9/28 and 9/29, 2000. Identified the scanner problem to you and awaiting for your further instruction.
2. Received your authorization up to 10 hours on 9/15/2000 e-mail for item testing and training.
3. Work requested on 8/30/2000 e-mail to perform on-site installation, testing and training.
4. E-mailed you on 9/26/2000 about the schedule performing the work requested in item 2.
5. The work performed was for 11 total hours on 9/28 and 9/29, 2000. Identified the scanner problem to you and awaiting for your further instruction.

 Subject: CEI setup for Ketth and Schinars
 Dear Mavits,
 Per your request of January 5, 2001, for finishing the CEI program setup
 for Ketth & Schinars in Orange City, Clinet has contacted Michele Bonner of
 Ketth & Schinars and tentatively scheduled Friday, January 19th, 2001 for the
 on-site technical support. The scope of work and man-hours/resource allocation are
 extraiting for the CEI interface program.
 Please installation, configuration, troubleshooting on scanner and user
 scope of work:
 These tasks will be performed by Bill Dean and Clinet Curtiss.
 Man-Hours/Resources Allocation
 Name Hours Labor Classification
 Bill Dean 8.0 System Integrator
 Clinet Curtiss 8.0 System Analyst
 Total 16.0
 Please give us your authorization to proceed with this work as soon as
 possible so that we can adhere to the tentative schedule. Please call me if you
 require any more information or have any questions.
 Regards,
 Li

Mavits, thank you for your response. Here is some information for you.
McChale (I do not know her last name) from Kettch and Schmaras made the
request to Clinton. She will not be in the office on Thursday 2/22/2001 or
Friday 2/23/2001.
Mavits, thank you for your response. Here is some information for you.

LJ

We received a phone request from Kettch & Schmaras, DOT CET beta test site, for
the on-site technical support. They have a new scanner and seem to be having
difficulty setting it up and working with the CET program. Do you want us to
provide technical support to them? Please advise. Thanks!

Good Luck,

the import from Pompano.
seriously doubt that it will improve your time output. You may have to run
Lancebreak but since we set that to little at one document per second I
exe off one of them and replace yours if you want to test it without the
batch import on several machines in Tallahassee. You could grab the
changed other than our Lancebreak that we added in Pompano. Vern should have
Pompano, and have them push the button there. The batch import hasn't
transmission to make sure that the image exists. Install the import
zillion miles away. The batch import vertifiles each image before a
which have not. As to the speed it might be due to the fact that you are a
process. Otherwise you will not know which records have been checked and
actual import into Arcis. Those changes are made after the verification
vertification numbers so that we can compare our import database to the
clean up the spec sect number. This field is where we placed our
reattribute. That was Bill/Verns end of the migration. They also have to
The Modelled by and the QC operator are added after the import through

Clint

Get back with me after you have time to evaluate the changes.

that you are importing.

Just Zoom it in until the print matches a readable size and it should give you a fairly good idea of the quality of the image addition. For now, you will still have to deal with the YELViewer for a little while longer.

I wanted to get you tweaks out to you as soon as possible, so I did not have time to incorporate the new viewer into this

This version is for test and comments.

Inside this zip file are three files which should now keep track of the directory from which you import your images and deletes the old CEF files after they are imported into the archive.

Clint

Clint

As discussed in the last meeting, I would like to pursue the development of help files for the CEF Image, Exporter, EDM Support Database, Juke Box Support Database, GRIP Support Database, Software Inventory Control Database. You have identified Joe as a possible resource, is it OK if we pursue getting this done?

Support Database, Juke Box Support Database, GRIP Support Database, Software Inventory Control Database. You have

Here are some things we have learned during our testing of this system.

Pre-Attributing, Our CEI offices have done an excellent job of establishing attributes for their files. I have difficulty keeping up with the two of them. I envision a residency with three or more "PROJECTS" sending files to the FTP site having to delicate an employee to the downloading-uploading task.

An employee should probably be assigned to perform QC on both the imported images and the images that are scanned in from the online CEI's. This person would need attribution rights but since they would only be verifying content and orientation. All attributes would already have been assigned by the CEI either in the CEI import package or in the Scanner Client.

FTP site: The seven day rule almost caught me. Files were saved to the FTP site while I was off from work for a long weekend. Each residency will have to establish a fail safe method of file retrieval from the FTP site to ensure no file is removed due to the 7 day rule.

This problem will be overcome once the secure FTP site is in place.

Are my files actually going to CDMS? We had a scare last Wednesday, The EDMS servers had been off were being worked on. I sent six files up early that morning. When I checked behind myself an hour later the files were NOT in CDMS. I had erased the files from the FTP site and the exporter erased them from my PC. I am 99% certain today those files made it into CDMS. I had 54 packets of files downloaded at that time and I wasn't completely certain which ones I had sent up to the server. When you are doing this volume of file transfer you need some kind of verification that your files are actually going to the server.

Verification of transfer can only be accomplished by opening the Arc's retrieval client and doing a search for that days import. This is fairly easy since we have now changed the store date to be the FDOT date rather than the CEI date.

Connectivity: Your ability to plan your day now depends on the file transfer rate you get from your system. Mine has run from 5K to 1050K. We've had a T1 line all along and learned all about routers, IC1, and BellSouth's poor wireless grids. My D-5 Data center folks keep telling me to transfer during off-peak hours. I still haven't seen a difference related to time of day. I just checked and I am running 914K @ 9:00 am. Maybe it will be an issue once the bandwidth is saturated.

If connectivity does become a problem and they go to a verification system where a single employee verifies the import. That employee could be scheduled so that imports were done after regular FDOT hours. The viewer provided by Yang could be made more user friendly. It has no multi-page viewing capability and seems to be a lower resolution than the pixel viewer.

The viewer does have a lower resolution but it is the best we can find at this time. It does have multipage functionality. They just need to right click on the image and select next page, etc. Double clicking on the image to make it full size will also tell the user how many pages exist within that document.

We have requested the new License file from CE.
If by chance it does not arrive in time, you can use the actual License
that were delivered last August until we get the others.
Let me know if you need anything else in the mean time.

Bill

If you have any problems with them, please give me a yell.

Since you don't remember, I'll assume Vern did not give them to you. So, here is a resend of the permanent license files. They are marked for each district. When you install them, rename them to just "license.dat". Like the old files.

Dale,

Subject:

In regards to the ARCSIS permanent license files stated in your Dec. 1 E-mail regarding the new date code to extend the ARCSIS license file, I would like to clear up any confusion.

ARCSIS permanent license files were delivered on diskettes via FedEx to FDOT on 8/24/00. Due to failover concerns that the FDOT had regarding its cluster structure and that unique permanent license file information is tied to each server, we authorized the FDOT to use a development license in lieu of the permanent licenses for use on its production servers and one (1) test server until it upgrades to ARCSIS 7.2, which as You know, does not require a license. This workaround was proposed in order to save time and cost since FDOT had indicated that it would be upgrading to ARCSIS 7.2.

In that regard, we sent a development license to FDOT on 12/12/00 (license.dat) to be used as a workaround for your failover concerns until FDOT upgrades to ARCSIS 7.2, however, the FDOT still has legal ARCSIS permanent license files for its 10 servers.

Please call me if you have any questions.

M.

In your 4/2/01 e-mail response to Tom White, would you please tell us which

his/her FDOT project engineer.

The document export function has the capabilities allowing users to select a document (s) from his/her archive and package them for electronic transmission to his/her FDOT project engineer.

CDMS-approved distribution, retrieving and viewing documents, and many more. The document management function allows capturing documents, indexing them to user defined distribution, such as transmitting documents, the document management function has capabilities of scanning or transmitting documents, document management and document export for electronic distribution; document management and document export as Vortex, has two major functions: document management and document export for Vortex, has sold RSA a license for VMS software. The VMS, which is now copyrighted as Vortex, has sold RSA a license for VMS electronic document management transmission. In the past, we had with you regarding requirements that he provided to me and the discussion we had with you regarding some confusion regarding what software he feels he needs, based on the he sent to you and copied to us today. Based on this e-mail, there appears to be but the only contact we have received back from him is through the e-mail which I e-mailed Tom White regarding our support contact information later that day.

forwarding any future correspondence in this regard. Thank you for taking us on Tom White's e-mail on Friday, 3/30/01. It is always our goal to work together with FDOT to meet its goals and specifically the goal of storing of images from CEMs into FDOT's CDMS. We would appreciate you forwarding any future correspondence in this regard.

12/11/00, ARCIS is a middleware portfolion of the Certifcication product, which has been scheduled for release in December, 2001. According to the information we have to date, ARCIS Client is Windows 2000 compliant. We are checking with our partner to confirm that the ARCIS Server component is Windows 2000 certified as well. As soon as we find this out, we will let you know. If you would like to request for Windows 2000 certification of the ARCIS Server prior to the December 2001 release date of Certifcation, we will put that request into our partner.

Steve
Best regards,

Please contact me if you are unsure on how to set the Log Level in the system registry. I'll give you a call directly.

1. Clear the API_Log and Webstry_Log
2. Set the Log Level to 10
3. Run ARCSIS and recreate the steps to experience the errors
4. Close ARCSIS
5. Reset the Log Level to 0
6. Send me the log files

Please follow these steps to get "Clean" log files for inspection:

Good morning, Our ARCSIS technical contract has requested a copy of the ARCSIS API_Log and Webstry_Log with the Log Level set at 10.

No performance benchmarks are available. Performance will depend on the tuning of the database itself and the type of queries the user performs.

Answer #3

3. Are there performance benchmarks available for the Arcis web server? Most interesting is the complexity of queries. As number of users, and sizes, number of queries, and is interested in comparisons among archive sizes,

Arcis does no optimization in querying data from the database. A complex query issued through the web client will be as fast as the fat client. But, the refresh on the web client will always be slower than the fat client.

Answer #2.

2. Are there going to be performance issues related to complicated select statements from a web browser. In other words, what performance differences should we expect to see in a query on a single attribute compared to a query on many attributes?

Arcis technical support has not found such discrepancies. One possible issue is the lookup of the annotations. Even if there are no annotations per document, the javascript client will look for one. On JavaScipt, this could be slower. Make the same query using the HTML client and compare. Please let me know the result. I've found that the HTML client seems to be the most responsive.

Answer #1

1. Retrieving a hitlist of 290 records takes about 9 seconds using the fat client and about 12 seconds using Java. Applet through the web server.

I have several responses to your questions concerning Arcis web server:

I will be receiving a written confirmation letter that will state the following: Arcis-Web 2.1A0 is tested and released with Arcis (NT) V7.2. The official release have been available since 10/2000. I will mail this confirmation letter to you as soon as I receive it.

Steve
Best regards,

Please let me know how I can help you with any other issue you have concerning your ARCSIS upgrade plans.

I've submitted a request to ARCSIS technical support in Germany for ARCSIS Web Server #5
Answer
recommendations and optimizations that would be more specific to DOT's proposed deployment. The ARCSIS Web Server installation requires configuration and optimization that would be more detailed than what DOT focuses on in selecting web servers for running the document on the install CD of ARCSIS Web Server.
and Adminstration guide gives information on server and client hardware and administration guidelines and performance monitoring. You should have a soft copy of this documentation.

Should this be what DOT focuses on in selecting web servers for running the ARCSIS Web Server? Answer
Does ARCSIS have any suggestions on hardware configurations for the ARCSIS Web Server and optimization recommendations for the ARCSIS Web Server and Microsoft IIS for performance? Based on the testing mentioned above, DOT is looking at purchasing servers for maximum CPU performance over other considerations.

This assumption is correct. Building up a query requires database CPU time is required to retrieve a document from the archive. Very little resources. The database is always the bottleneck in any query. Very little time is required to retrieve a document from the archive.

Answer #4
4. DOT's testing to date seems to indicate that creating a hitlist is more resource intensive than retrieving images, at least as far as CPU time goes. Is this a safe assumption?

Mavis

No invoices have yet been received for services after August 01.

The original application software was purchased for Yang's use prior to contract. The contract was only signed after they had delivered a "successful" application. How do you want to handle the billing for maintenance prior to contract execution?

The effective date of the Yang contract (PO162) is January 20, 1999. I have discussed the problem with Yang and they are going ahead with processing the PO for the 98/99 maintenance. However, the invoice for 98/99 maintenance, on application #1 is for the time period July 98 - June 99. The \$210,000 (dated 3/26/01 and received 3/27) for 99/00 software maintenance is in purchasing for PO. The \$67,500 (dated 3/26/01 and received 3/27) for 98/99 software maintenance is in purchasing for PO.

The \$5,000 (dated 3/26/01 and received 3/27) for the Developers Toolkit was processed for payment on LPO N97420 (on 3/30/01)

The \$19,499.31 (dated 3/19 and received 3/27) for Aug 01 services is out for payment.

The \$21,633.81 (dated 3/19 and received 3/27) for July 01 services is out for payment.

The \$250,000 (approved by you in February) for software for the final application is out for payment.

I heard your presentation at the Texas AASHTO in January regarding the DOT imaging advancements. We currently have (matrix DOT) processes of choosing a vendor to supply us with an imaging solution that can become a document management solution. Yang is very much in the running, so I am writing to get some insight from you on working with Yang and how happy (or unhappy) you have been with their support. They have given you (FDOT) as a reference, but have not provided a contact name as of my writing this. If you are not the person to do this, could you give me the name, email, and phone number of someone who could? We are looking at imaging a backlog of 1,35 million documents and then影像ing as time goes on.

Additionally, we hope to move other departments and functions over to documents. These of course would include Word processing, spreadsheet, CAD, contracts, etc. We hope to move all our Project Development documentation into a "day forward", imaging system for all our documents.

I am attaching a diagram showing a flowchart of our current document management process. The diagram shows the following steps:

- 1. Data entry (e.g., Microsoft Word)
- 2. Scan (e.g., scanner)
- 3. Image (e.g., Microsoft Word)
- 4. Database (e.g., Microsoft Access)
- 5. Search (e.g., Microsoft Access)

The diagram also includes arrows indicating the flow of information between these steps. There are also feedback loops from the search step back to the database and from the search step back to the image step.

*At the end of the fiscal year, each cost center will receive a report to estimate outstanding commitments. This will be used to estimate the costs of those outstanding goods or services. If you underestimate, then any excess needed to be paid will come out of next years funds.

*If you do make purchases in June, the requisition must be accompanied by a justification for the procurement of the goods or services.

*This year only commitments will be certified forward (not obligations). This means that only those goods or services received prior to June 30th will be certified forward. In other words, a PO cannot be issued at the end of June to come out of CY funds (that is an obligation, not a commitment).

Nelson, just thought I needed to make you aware of the changes in certified forwards, so that you can relate this to your Managers, to ensure we do not run into the problems we did last year.

We need to request this source code from Yang in order to expedite the rewrite process.

While we were given the source code on the batch exporter module, we did not receive the source code for the viewer, which seems to be a separate module. Without the source for the viewer I would need to write it from scratch and this could take several weeks to match the way it is interacting with the batch module.

The viewer we received that came with the batch importer needs to be changed to match the viewer I wrote for our batch exporter module.

As you are aware, more and more of FDOT's business functions are being outsourced. A full 70% of all construction projects are being handled by CEI consultants. The injunction has stopped the ability of FDOT to manage these files electronically.

EDMS is the ability to instantly access the document images without the necessity of routing multiple paper copies.

This interference in FDOT businesses is creating delays and will result in excess costs being incurred. At the Construction EDMs teleconference this morning, it was pointed out that a positive benefit of the

CONFIRMING our conversation this morning, since it is obvious (based on invoices and documentation) that FDOT owns the entire code for the CEI import/export module, does FDOT plan to move to set aside the injunction?

Re: ARCSIS and Mavis Georgallis

12/11/00, ARCSIS is a middleware portation of the Cetiq product, which has been scheduled for release in December, 2001. According to the information we have to date, ARCSIS client is Windows 2000 compatible. We are checking with our partner to confirm that the ARCSIS server component is Windows 2000 certified as well. As soon as we find this out, we will let you know. If you would like to request for Windows 2000 certification of the ARCSIS server prior to the December 2001 release date of Cetiq, we will put that request into our partner.

Introduction to EDMs.

The invitation is still good - let me know when it would be good for you to come down for a "hands-on"

Vicki --
In reference to the third "bullet" under #2 -- I don't think you mean that the Districts must go through you and Bud for EDMs services -- I think we discussed that the Districts were to be cautious not to contact Yang Enterprises for services unless preapproved. Since it is the construction personnel that Yang is contacting (and we have already addressed this problem with them), I think Nelson had recommended that the DISMs be made aware of the problem at a DISM meeting rather than by written notification.

Vicki

Any problems with this? Did I miss anything?

5. Mavis - Please provide me a copy of PO# 31932 and any supporting docs. I would also like to arrange a brief overview of the EDMs software. I've seen GIS recently, but not EDMs.

4. There is a concern about ARCS upgrade from 7.0 to 7.02. Vicki and Mavis will have a followup meeting to discuss what we need to do to get the needed patches.

3. There is a concern about the invoice from last fiscal year. Yang is to provide information to Nelson on a list of issues before the invoice can be paid. Since this money is not provided soon, we may need to be addressed and paid before Dec deadline. If a response is not provided soon, we may need to discuss options for retaining the money from last fiscal year's budget.

they must go thru Vicki for EDMs Professional Services work authorization. Vicki has asked Bud (District Coordinator) to remind district staff that they must be specifically authorized by Vicki in advance and in email. Nelson has already discussed this with Yang. Vicki is advanced under our agreement. All communication will be done via Professional Services - Any work outside the Maintenance Agreement (billable hours, etc) bounds of the maintenance agreement. Mavis - can you communicate this to these 3 folks? Contacting Yang for maintenance calls under our agreement. All communication will be done via email, and a standard email template should be used that reiterates that the request is within the Maintenance Agreement - Windy, Lance, and Dale are the only DOT staff that should be and other purchasing documents. Nelson has already discussed this with Yang. maintenance requests under our Maintenance Agreement. Vicki will sign purchase orders and other purchases. Nelson will be moving Special Technology section under Applications. This will better facilitate the integration of enterprise applications for the DOT. In addition to the reorg of districts to OIS, this will provide a more logical structure.

2. Nelson discussed our relationship with Yang for EDMs.

1. Nelson will be moving Special Technology section under Applications. This will better facilitate the integration of enterprise applications for the DOT. In addition to the reorg of districts to OIS, this will provide a more logical structure.

I want to be sure I have everything straight in my mind that we discussed. The following is a summary with action items:

thank! Vicki

Steve first before processing the partial payment. Early next week would be great if you can schedule some time for us. Mavis - can you please meet with me and help me review the invoice and the concerns? I can then pass it by Nelson and

only course of action at this time for us.

I propose that we determine which items on the invoice are not in question and pay that amount. That seems to be the

about to lose the opportunity to pay this invoice with these funds since the deadline for completion of payment is 12/31/01.

Yanig on your inquiries related to the invoice for which we certified forward funds from FY 2000/2001. We are

Nelson, unless you've received something in the last day or two, I assume we still have not received a response from

Nelson Hill's recommended course of action regarding "delete flaw". Are "we" going to fix the flaw, or is the software designer? When? Anticipated browser-version implementation date. Do we have a firm date? Training (will there be an on-line tutorial, formal training, or will it be learn-as-you-go?)

The following are the items that I am interested in:

Can you please add "Browser Version Timetable" to the EDMs section for discussion during the teleconference? The State Technology website states (as of earlier today) that the roll-out will be in December 2001, however, as of our last teleconference there was still a flat lay (the ability to delete documents) that was preventing implementation. The reason that I am so interested in the browser full version is because over 2/3 of the SMO only needs read/print rights for EDMs, which will not require full installation of ARCS once the browser-version is running.

Thanks.

Once the browser version is available, will there be an e-mail sent to all DOT employees telling them of the web-site? If not, how do we intend to inform the non-ARCS user?

On December 3, I received a copy of the response to our billing inquiries (Sept 2000 only) signed by Mike Cohen (I think, signature is not clear) for Ting-Lin Yang. Nelson and I both were contacted by language used throughout the document pertaining to the maintenance agreement. For example, "DOT had not paid the maintenance fee; thus, it did not receive the upgrade software, which would have supported the DOT's scanner...." I spoke with you during the week of Dec 3 to clarify if Yang billed for the work because the work was not covered by maintenance regardless of whether the maintenance agreement. You said that you believed the work was not covered by maintenance regardless of whether the maintenance agreement.

Another meeting was held with the Yangs, Steve First of DOT Legal, myself, and an attorney for Yang in August. Several topics were covered, but Nelson and I reiterated the need for a prompt response to our inquiry on the unpaid invoices so that payment processing could be completed before the December deadline for certifying forward funds for last fiscal year. Nelson again stated that all services work would be specifically authorized in email to avoid potential confusion, and at this meeting named me (Vicki) the point of contact for all communication for the contracts, including the authorization in writing for services work. Mr. Yang mentioned commitments for the following 3 weeks, and said a response would be sent to us shortly after that.

Yang submitted invoices to DOT in April (dated April 13) for the months of Sept 2000 through March 2001. Nelson Hill, and perhaps Mavis, discussed with representatives from Yang, DOT's concern about some of the items in writing before beginning work. All parties agreed that this would greatly reduce the confusion on the billing for services. Nelson Hill pointed out that all billable services must be clearly authorized in email and in the discussion. Nelson Hill also provided a list of items in question in May 2001, and clarification was requested in our maintenance agreement. A list was provided with the line items in question in May 2001, and clarification was requested in email and in the discussion. Nelson Hill pointed out that all billable services must be clearly authorized in writing before beginning work. All parties agreed that this would greatly reduce the confusion on the billing for services.

The following is my understanding:

Rather than ask for clarification again and wait on an email response, this note is to document the information you have been discussed in various meetings:

To: Jim Hopper at Yang -

Please review and comment ASAP. I would like to send this to Yang:

1. Update to Spec Section Attribute

EDMS

4. Status of SiteManager 3.0 Upgrade

3. Status of Class 1 Conversion

E-mail from Vern Danforth:

On Dec 11, Nelson and I called you so that Nelson could get clarification on the billing concerns and make a final decision on paying the outstanding invoices. We asked for email confirmation on the billing concerns and let the earler discussion pertaining to the maintenance agreement had been paid, and you agreed to confirm this with the Yangs and let me know. In addition, you asked if the response for September's invoice was acceptable before continuing with the other invoices. I said that I would confirm that it was satisfactory with Nelson and let you know because additional responses may not be required. I also asked if there were any outstanding charges that had not been submitted to DOT (not the first time this has been asked). You stated that you believed that we had all of the outstanding invoices.

On Dec 11, Nelson and I called you so that Nelson could get clarification on the billing concerns and make a final decision on paying the outstanding invoices. We asked for email confirmation on the billing concerns and let the earler discussion pertaining to the maintenance agreement had been paid, and you agreed to confirm this with the Yangs and let me know. YETI's Support to [REDACTED]

Subject:

CC:

To:

11/08/00 09:04 AM

----- Forwarded by Vern Danforth/CO/FDOT on 11/08/00 09:04 AM -----

In regards to the E-mailed agenda items.

In your E-mail to Dave Stedding, you stated that no one from FDOT has seen any one from Semmens in over two years. This point needs some clarification. Prior to July, 2000, Semmens was the ARCTIS product owner for the U.S. Our contract with FDOT was just executed in Feb. '99, and YET and Semmens executives met with Mavris on several occasions in Tallahassee following the contract execution. Mavris understood why you say it has been over 2 years. A meeting with the product owner will need to be coordinated with us, and we would be happy to go to Tallahassee. Please be aware that YET has not yet received the official contract assignment. Semmens requested from CE/Treewee to let you know we have provided CE information to you in the past as a courtesy to CE/Treewee. We have direct support from the ARCTIS product owner in order to provide a better response to our customers. Semmens had the exclusive rights to the product prior to 8/1/00.

The area also seems to be confusion about the scheduling of our resources, specifically BII1 and CII1. Mrs. Yang is the only person who is authorized to schedule BII1 and CII1 and Clint. There also seems to be confusion about the scheduling of our resources, specifically BII1 and CII1 and Clint. Mrs. Yang is the only person who is authorized to schedule BII1 and CII1 and Clint. These

YETI as it is ultimately our responsibility to respond. The request to CE from you raised confusion with CE regarding how to respond. In the future, in order to get responsive support, please contact me at the YETI Help Desk.

We believe that our partner agreement provides the most benefit to both partners from the business aspect - let the partners do their job while the product owner concentrates on the software development. We believe you understand this support very well since you have been an Intergraph employee for years. We now provide the training to other ARCTIS customers as we started to Matrix in an E-mail on 7/13/2000. In addition, CE and Yang are discussing and strategizing about joint venture for software development of CE's products and professional services, including training. This indicates a great future for the support of ARCTIS.

Mike Cohen

Regards,

If you have any more questions, please contact me.

Also, we stated in our last e-mail that Clint will not be available for the week of 11/13. If we need to schedule another time for Clint to go over the programming issues, please let Mrs. Yang know as soon as possible.

We were under the impression that Lance is the one who is going to handle the database cleaning. In fact, this is Mavis, call to make the decision. If we are the one designated by Mavis to do the job, we will coordinate with FDOT for this task.

Mavis if you require more information on this subject.

The information in regards to CE/Treve has already been addressed to Mavis, and she has been kept abreast of the situation from time to time. Please check with Mavis if you require more information on this subject.

You asked you to provide more information on this issue. On 8/18, we received memo addressing the requirement. In your memo, you did not request either more or otherwise that you would let us know if you did.

We mentioned the Export Query and View program briefly in the 8/15 meeting. You mentioned the Export Query and View program briefly in the 8/15 meeting.

Items 12, 13

of 11/13, we can have Bill demonstrate our EDMS to you.

Week limited to DOT CERT consultants. If Mavis has no problem using time on the development and testing. This program is available to everyone and is not designed for enterprise wide implementation due to time constraints for the EDMS.

EDMS does not provide a sophisticated storage management like ARCS does, and it is not designed for enterprise wide implementation due to time constraints for the EDMS scanning, indexing and viewing. The most significant points are that YEL's business/workgroups. The system uses third party software (not ARCS) for

Yes, we have developed an EDMS system, which is designed for small businesses/workgroups.

Mike,

Mavis Georgalis
Re: YEI's Support

1. YEI is by contract the first line of support for Arcis issues.

2. YEI is a partner not just a VAR/Reseller of Arcis.

3. Arcis change requests and trouble requests should be logged with YEI.

4. YEI has a partner agreement with CE/Slimens for future development and marketing of Arcis.

5. YEI and CE have no official contract (of any kind) in place to date. - This is a contradiction to number 4.

6. The standardization EDMS that was developed (and paid for by FDOT) is "available to everyone and is not limited to FDOT CEI consultants".

7. Yang is still not sure if we asked for a proposal on the "Export Query and View" program. - Yes, FDOT did and we are still waiting for a response.

8. The integration of the Arcis and Trevy application is unknown at this time. But, it is a relevant topic.
9. Clint is not available the week of 11/13/2000. Please let me reiterate from a previous email "it was my understanding, he was coming the week of Nov. 13th. If something has changed, please make sure that Bill is prepared to bring all the mentioned code and documentation that Yang has developed for the FDOT EDMS project for our review."

Thanks,

You stated below that a second invoice for Yang on PO 033459 was done on 3/28/01. However, it was not date stamped when received by your office. The invoice date is 9/29/00 which is generalizing over \$5,000 in interest. I need to know when the invoice was received in your office. I noticed that you signed and dated the invoice 3/27/01. What does this date mean?

I wanted to check with you on this interest penalty for Yang and verify the transaction date.

is the lookup of the annotations. Even if there are no annotations per ARCSIS technical support has not found such discrepancies. One possible issue Answer #1

1. Retrieving a hitlist of 290 records takes about 9 seconds using the fast client and about 12 seconds using the Java Applet through the web server. However, it takes the web server 82 seconds to retrieve the same list using the JavaScript client and results in 100% CPU utilization on the web server during the retrieval, why is there such a performance difference?

I have several responses to your questions concerning ARCSIS Web Server:

I will be receiving a written confirmation letter that will state the following: ARCSIS-Web 2.1A10 is tested and released with ARCSIS (NT) V7.2. The official release have been available since 10/2000. I will mail this confirmation letter to you as soon as I receive it.

Thanks,

2. Have you received recommended Web Server hardware configurations and optimizations that would be specific to FDOT's proposed deployment of the Arcis Web Server?

1. Have you received a letter from the Arcis people that Arcis-Web 2.1A.10 is tested and certified to work with Arcis (NT) V7.2?

I am following up on two items from the email below that are still outstanding, specifically -

Steve -

Please let me know how I can help you with any other issue you have concerning your ARCSIS upgrade plans.

I've submitted a request to ARCSIS technical support in Germany for recommendations Web Server configurations and optimizations that would be more specific to FDOT's proposed deployment. The ARCSIS Web Server installation and Administration guide gives information on server and client hardware requirements and performance monitoring. You should have a soft copy of this document on the install CD of ARCSIS Web Server.

Answer #5
ARCSIS Web Server?
Should this be what FDOT focuses on in selecting web servers for running the purchaseasing servers for maximum CPU performance over other considerations. Performance based on the testing mentioned above, FDOT is looking at Web Server and optimizing the ARCSIS Web Server and Microsoft IIS for Web Server and hardware configurations for the ARCSIS.

Answer #4
CPU time is required to retrieve a document from the archive. Very little resources. The database is always bottleneck in any query. Very little assumption is correct. Building up a query requires database.

Answer #3
Is this a safe assumption? Xsource intensive than returning images, at least as far as CPU time goes. FDOT's testing to date seems to indicate that creating a hitlist is more tuning of the database itself and the type of queries the user performs. No performance benchmarks are available. Performance will depend on the complexity of queries.

Answer #2
ARCSIS does no optimization in querying data from the database. A complex query issued through the web client will always be slower than the fat client. The refresh on the web client will always be slower than the fat client. It is interested in comparisons among archive sizes, number of users, and is interested in comparisons among archive sizes, number of users, and

Answer #1
2. Are there going to be performance issues related to complicated select statements from a web browser. In other words, what performance difference should we expect to see in a query on a single attribute compared to a query on many attributes?

document, the javascript client will look for one. On javascript, this could be slower. Make the same query using the HTML client seems to be the most we know the result. I've found that the HTML client compare. Please let me know the result. I've found that the HTML client seems to be the most responsive.

p.s. Please call Windy later this afternoon. She has been trying to get in touch with all of you all day.

Re: Arcis Support

So, we still need a fix for this problem and the previously reported problem of Attribute Fields showing up even though they are marked as "invisible".
I rebooted the server, cleared "Temporary Internet Files" on my computer, and tried the Java client on a fresh Windows NT install to rule out any kind of problem with the old Java files being cached somewhere.
I copied the patch files over, followed your instructions, and the option to use the external viewer is still present. As far as I can tell, the patch files made no difference in how the Java web client works for us.

Lance,

older.

I am in the process of uploading a patch (A7ZPatch.zip) for the Java client. It is/will be in the incoming/edms

This will fix the external viewer-markup issue.

Stop the web service and replace the web server files with these. Check the registry for a ARCS Web\ARCSIS key. If it is there, delete it. Restart the service.

Bill

This will fix the external viewer-markup issue.

Stop the web service and replace the web server files with these. Check the registry for a ARCS Web\ARCSIS key. If it is there, delete it. Restart the service.

I am in the process of uploading a patch (A7ZPatch.zip) for the Java client. It is/will be in the incoming/edms

Thanks,

How can we disable this option in the Arcs Web Java client?

but I cannot determine any way to disable this option.

Using the Arcs Web Administration tool you can set this option to be checked or unchecked by default.

This problem I have identified is that the Java client has a checkbox "Show document in external viewer". This option will allow a user to view an redacted NCI document in some other viewer, without the redactions. Since we will be using Arcs Web as the client for Arcs 7.2, we have to be able to insure that particular, the Java document viewer displays redactions when the user views a document. In

We will be using the Java client because it provides most of the functionality of the fat client. In particular, the Java document viewer displays redactions when the user views a document.

I have a question/problem concerning the Java web client for Arcs Web 2.1:

Yang PO S-5501
Mavis Georgallis/C

Subject: 06/19/01 08:12 AM
To: Nelson L Hill
Cc:

----- Forwarded by Mavis Georgallis/C/O/FDOT on 06/19/01 08:27 AM -----

Mavis
Thanks,

I am forwarding the IRR over to Nelson for his initials and will send you a copy.

Lynn --
Per the attached, please do a change order on the referenced PO to increase by \$30,000 for a total
of \$270,000.

Yang PO S-5501

To: Lynn Robinson/C
Cc:
Mavis Georgallis

I will need a copy of the IRR before Purchasing will proceed with the change order. In addition, I need a justification for Purchasing as to why we waited until June to purchase this maintenance. Thanks.

WILL let you know when I find something.

I'm going to have to go over all of the tables to see where a change could have taken place to change the rights.
I took my server back to the same build that you are using and still could not reproduce the problem.

Yang Expenses YTD

Excel Spreadsheet named "Yang Expenses - Mavis and Lynn 031802"

Both the Importer/Exporter program and the Vortex program was demonstrated to hundreds of CEI's at the FHOT CEI Conference held in Orlando.

Vortex program even though Yang had already expended its single license in the original Importer/Exporter viewer product developed for FHOT. A toolkit is required for each product developed. Yang is very bad about proper licensing; at one time they had the entire office (over 20 people) were using the same copy of Office 97. They had 15 engineers working on a single copy of Microsoft station. When they transferred the source code on the Importer/Exporter modules. LeadTools is heavily used in the viewer product developed for FHOT. A toolkit is required for each product developed. Yang is very bad about proper licensing; at one time they had the entire office (over 20 people) were using the same copy of Office 97. They had 15 engineers working on a single copy of Microsoft station.

Engineering & Computer Services
YANG ENTERPRISES, INC.

We have received on June 11, 2001 the FDOT Purchase Order Number S-5501-034390 dated June 01, 2001.
There appears to a discrepancy in Line Item 2, which lists a Software Maintenance Fee for a four month period totaling \$15,000.
You will remember that on March 27th, of this year, Mr. Ralph Thompson of Yang Enterprises, Inc. hand delivered to you personally FBI Invoice Number CI-01-03-0010. This invoice listed \$270,000 for the ARCS Software Maintenance Fees, due for FY 2001.
Mr. Nelson Hill emailed to Yang Enterprises, Inc. on March 30, 2001 (on which you were cc:) and requested the \$270,000, be re-submitted on an invoice for payment after July 1, 2001, to accommodate FDOT Budget constraints for FY2001. Yang Enterprises, Inc. agreed to Mr. Hill's request and Dr. Yang emailed acceptance of this request back to Mr. Hill on April 2, 2001.
Based upon YFI's compilation to Mr. Hill's invoicing instructions, we assume that Line Item 2 of subject Purchase Order is an error and should be corrected to comply with Mr. Hill's instructions.

Jim Hopper
Business Manager
Mrs. Yang
Dr. Yang
Mr. Nelson Hill
Cc: Mr. Nelson Hill
Sincerely,
I await your response.

Jim Hopper
Business Manager
Mrs. Yang
Dr. Yang
Mr. Ralph Thompson
Mr. Thomas C. Feeney, III

like FDOT to furnish this to them free-of-charge. On discussions between Georgealis and Yang, Georgealis stated to Yang that it would not be in the best interest of FDOT to become a training and maintenance nightmare.

On request of Yang, Georgealis indicated that if Yang, at its own expense, wished to develop and market a low-to-moderately priced EDMS application that would be available for purchase, there should be no conflict.

Subsequently (see e-mail from Mike Cohen dated April 4, 2001), Georgealis was notified by Yang that Yang had copyrighted an EDMS product known as "Vortex." 16. Yang developed FDOT's EDMS (with Siemens) as system integrator - based on proprietary document management software (ARCS) developed by Siemens. 17. FDOT requested Yang to develop two (2) interface applications (later called CEI Exporter and CEI Importer) - FDOT required the two interface applications operate as a set in order to work properly.... It was at all time the intent of FDOT that the application which is the subject matter of the within suit be the property of FDOT (see Contract #FO162, Other Special Conditions, Paragraph 1(C)).

Further, Yang (individually & corporately) were aware that the development of the application for FDOT included all steps necessary to coordinate document image capture with external consultants (see Yang Monthly Status Report, for period June 1, 1999 thru June 30, 1999, Paragraph 5, fourth bullet).

The initial code for that portion of the application referred herein by Yang as "CEI Importer" was developed by Yang for FDOT and subsequently modified and enhanced by FDOT.

Further, Yang (individually & corporately) were aware that the development of the application for FDOT included all steps necessary to coordinate document image capture with external consultants (see Yang Monthly Status Report, for period June 1, 1999 thru June 30, 1999, Paragraph 5, fourth bullet).

Yang involved and received payment from FDOT for the development of software products referred to by Yang as "CEI Exporter" and "CEI Importer".

Yang involved and received payment from FDOT for the development of software products referred to by Yang as "CEI Importer" and "CEI Importer".

The initial code for that portion of the application referred herein by Yang as "CEI Importer" was developed by Yang for FDOT and subsequently modified and enhanced by FDOT.

Yang involved and received payment from FDOT for the development of software products referred to by Yang as "CEI Exporter" and "CEI Importer".

Yang involved and received payment from FDOT for the development of software products referred to by Yang as "CEI Importer" and "CEI Importer".

Further, that portion of the code referred to herein as "CEI Importer" is used for migrating images from other sources into the FDOT EDMS...19. CEI Exporter allows external CEs to transmit construction documents electronically to FDOT - developed (individually & corporately) were aware that the application for and owned by Yang (corporate and personal) - more than 2.5 years developing Yang and FDOT included all steps necessary to coordinate document image capture with external consultants (see Yang Monthly Status Report, for period June 1, 1999 thru June 30, 1999, Paragraph 5, fourth bullet).
